

# SOME OTHER COOL USES FOR SIGN CHANNEL.

## Fix it to the wall and hang banners from it.

To do this you will need two pieces of sign channel 50mm longer than your banner, pre drilled with fixing holes approx 300mm apart. The banner will need to be eyeletted with a minimum eyelet hole size of 9mm (standard size #3 11.5mm eyelets will be fine).

Fix two rows of pre-cut sign channel the depth of your banner to the wall. Slide the square M8 bolt heads to the approximate position in the sign channel – this is where the eyelets will fall.

Sandwich the banner eyelets between the large penny washers, front and back, and fit over the bolt threads and secure with nut, tension the banner from left to right gently pulling and tightening all the bolts until you reach the far end.
